1. Trading system gateways

1.1. Binary protocol gateway

Connection to the trading system via one of the binary gateways starts with connection to Discovery service. Discovery service performs logon operation and provides user with the list of available gateways, their types and IP addresses. After that user can connect to the required gateway(s). This operation is also required when user wants to reconnect to the trading system.

Discovery service — 194.247.144.5:7001 .

1.2. FIX gateway

FIX gateways:

1. 194.247.144.16:7180 — FIX trading gateway
2. 194.247.144.5:7196 — Drop-copy gateway

1.3. Message resend

Maximum number of messages requested with a single `ResendRequest` message is 1000. Several consecutive `ResendRequest` messages are required if number of requested messages exceeds 1000.

There is no limit to the maximum number of messages recovered with a single `ApplicationMessageRequest [BW]` message.

2. Market data feeds

2.1. Binary market data feeds

Transmitted market data feeds with available ports and addresses for multicast groups are listed in the table below. For more details about market data feeds and message formats, see *Native Protocol Market Data Service*.

Recovery gateway — 194.247.144.5:7132 .

When a client requests messages from the recovery gateway, the gateway will return messages transmitted not earlier, than 30 s before the request.

Market data for colocation or links 100 Mbps and above

Clients with high bandwidth links (at least 100 Mbps) or with colocation in the SPB Exchange data center can connect to binary market data feeds transmitted with lower latency during peak activity periods. To connect to these feeds clients should send a request to the Technical support service at the email address np-help@rts.ru. Transmitted market data feeds with available ports and addresses for multicast groups are listed in the table below.
