

# **Native Protocol Market Data Service**

Document version 1.19.4

04 July 2023

## **Revision history**

#### Version 1.19.4 July 4, 2023 года

Added Section 2.8 Volume dimension.

### Version 1.19.3 December 9, 2022 года

Changed the company logo.

#### Version 1.19.2 December 6, 2021 года

- 1. Updated the list of liquidity pools in Section 2.7 Liquidity pool identifiers.
- 2. The <u>BondAccruedInterest</u> message is added to Section <u>3.7</u> Instruments topic.
- 3. Clarified description of the topic\_firstseq field in the <u>TopicReject</u> message in Section <u>4.1.11</u> Report on rejecting request.

#### Version 1.19.1 October 6, 2021

- 1. Added security type "Exchange traded bond" to the security\_type field in the Bond message.
- 2. Added the table of correspondence between designations of instrument categories in the trading system and Interfax.

#### Version 1.19.0 August 4, 2021

- 1. The category field is added to the <u>Instrument</u> message in Section <u>3.7</u> Instruments topic.
- 2. Added error code 1405 in Appendix A.
- 3. Updated the list of liquidity pools in Section  $\underline{2.7}$  Liquidity pool identifiers.

#### Version 1.18.2 March 2, 2021

- 1. Improved description in Section 3.4 CurrentPriceOfMarket topic.
- 2. Renamed the Trade message to Indiquote.

#### Version 1.18.1 November 23, 2020

Added the EmptyBook message in Section 3.5 BestPrices topic.

### Version 1.18.0 September 2, 2020

- 1. The sub aggr component is renamed to sub dom. The yield field is added to the sub dom component.
- 2. The AggrMsgOnline message is renamed to **DomOnline**.
- 3. The AggrMsgSnapshot message is renamed to <a href="DomSnapshot">DomSnapshot</a>.
- 4. The aggr entry field is added to messages DomOnline and DomSnapshot.
- 5. The aggr\_offset field datatype in messages <u>DomOnline</u> and <u>DomSnapshot</u> is changed.
- 6. The yield field is added to the <u>Trade</u> message in the Trades topic.
- 7. The yield field is added to the Trade message in the CurrentPriceOfMarket topic.
- 8. The HIGH\_LIQUIDITY flag is added to the Trade message in the CurrentPriceOfMarket topic.
- 9. The yield\_close and yield\_last parameters are added to the Commons topic.

#### Version 1.17.7 July 24, 2020

Parameter codes are added to Section 3.6 Commons topic in the tables 21 and 22.

#### Version 1.17.6 June 2, 2020

Added warning about inexpedience using the parameters of a specific trade mode for setting up the trade system to the description of <u>TradeModes</u> message.

### Version 1.17.5 April 17, 2020

- 1. Description about the trading system's behavior in case a client uses other, than standard method of datafeeds processing was added to Section <u>1.4</u>.
- 2. The allowed range of values for topic\_seq and topic\_seqend parameter has been changed in Section 4.1.9.

#### Version 1.17.4 January 24, 2020

Added Section 4.1.4, describing client's send rate limit.

#### Version 1.17.3 July 25, 2019

Section 4.1.3 is renamed to "Keeping section in active state". Description of active session state maintenance is updated.

#### Version 1.17.2 February 1, 2019

Added value 4 (MemberTariff) to the fee\_schema field of the Instrument message.

### Version 1.17.1 December 14, 2018

- 1. Document structure was changed.
- 2. Terminology related to topic data transmission was changed.
- 3. Names of messages of OrderBook, Trades, CurrentPriceOfMarket, BestPrices and Commons topics are specified.
- 4. Description of key fields in topic messages was added.
- 5. The Heartbeat (msgid=15236) message was renamed to MdHeartbeat.
- 6. The topic\_header component was renamed to header.
- 7. The addresses component was renamed to Report Address.
- 8. The CommonEntry component was renamed to CommonsUpdateEntry.
- 9. The PriceLevel component was renamed to sub\_aggr.
- 10. The BestPrice component was renamed to <a href="mailto:sub\_best">sub\_best</a>.

#### Version 1.17.0 November 3, 2017

- 1. The BorrowingStatus message has been added to the Instruments topic.
- 2. The msgid field value changed for the <u>TradeModes</u> message.
- 3. The over\_the\_counter field added to the <u>TradeModes</u> message.
- 4. The msgid field value changed for the <u>Instrument</u> message.
- 5. The borrowing\_status field added to the **Instrument** message.
- 6. The trading\_status field of the <u>TradingInstrumentStatus</u> message renamed to status.
- 7. The list of parameters in the Commons topic, unavailable for over-the-counter instruments, has been added.
- 8. Terminology changes.
- 9. Error codes added.

### Version 1.16.0 November 30, 2016

- 1. The markets field added to the **Period** component.
- 2. The msgid value changed in the **Instrument** message.

#### Version 1.15.0 23 March 2016

The Market message is added to the Instruments topic.

### Version 1.14.0 9 March 2016

- 1. The message broadcast in the **Commons** snapshot is changed.
- 2. The **Commons** topic of additional snapshot is removed.
- 3. New values type=73 and 75 added in the Commons message.

## 1. Service overview

## 1.1. Data topics

The gateway currently provides the following topics:

- 1. OrderBook is a list of buy and sell orders for a specific instrument, grouped by price level. The number of levels is 50.
- 2. Trades is a list of public trades matched at the liquidity pools during the current trading day.
- 3. CurrentPriceOfMarket is a current market price, changing by the trade and the best order.
- 4. BestPrices is the top of an instrument order book—the highest bid and the lowest ask.
- 5. Commons is a list of statistic data of the accessed liquidity pools.
- 6. Instruments is instrument reference information.

Connection parameters are listed in the document Network Connectivity.

Messages of each topic are numbered consecutively in the seq field.

## 1.2. Broadcast modes

Topics can broadcast data in two modes — snapshot and/or updates.

A snapshot is aggregation of all current data, e.g. a whole order book, transmitted at a specified frequency.

Updates are separate messages generated and transmitted to the client when an event occurs.

During a period of inactivity in an update feed the system sends a MdHeartbeat to acknowledge connection. If messages are not transmitted for a longer period, there is either a transmission delay or absence of connection.

### 1.3. Broadcast channels

Each market data topic is broadcast through two identical UDP channels — A and B. Both channels simultaneously transfer messages with the same numbers. The channel duplication provides more transmission fidelity and lowers the probability of package loss. The client is strongly recommended to process both channels. For example, if a client receives n+1 message after n-1 message in A channel, then n message will be probably found in B channel. If a package is lost in the both channels, a client should either wait the next snapshot or request the message via recovery gateway.

## 1.4. Algorithm of receiving and processing topic data

If you want to connect to a topic with snapshots and updates, it is recommended to connect in both modes. First, you should receive a complete snapshot, then start recording incoming updates. You are recommended to record messages from both UDP-channels (A and B) and sort them by number. If an update has been lost in one of the channels, it can be requested in recovery gateway (messages, missing from the snapshots, cannot be recovered). If messages' recovery takes significant amount of time, it is recommended to request the snapshot instead of attempting to recover lost updates.

When snapshot is complete you should record the updates. Updates can replace or replenish earlier data, depending on the topic. For topics with replacement there are identifiers of updated data - keys. The keys are fields values of topic messages and are indicated in header of tables in section 3.

Table 1. Features of snapshot and updates

Topic	Upo	Chanchat	
ΤΟΡΙΟ	Replenishment	Replacement	Snapshot
Trades	<b>√</b>		Messages history since the start of the trading day
OrderBook CurrentPriceOfMarket BestPrices Commons	✓	/	An aggregation of all current data
Instruments		✓	

## 1.4.1. Example for OrderBook topic

The trade system may deny execution of client's request with an error message if the client's requests do not follow the algorithm specified below.

Updates from OrderBook topic replace earlier data.

- 1. Connect to the updates mode of the required topic and save all incoming DomOnline messages.
- 2. Connect to the snapshot mode of the topic and wait for SnapshotStarted.
- 3. Save all incoming DomSnapshot messages, until SnapshotFinished is received.
  - If some DomSnapshot messages have been skipped, or update\_seq values are different for SnapshotStarted and SnapshotFinished messages, then repeat actions 2 and 3.
  - If there is no saved DomOnline message with the number equal to update\_seq+1 , then repeat actions 2 and 3.
- 4. Compare keys values of DomSnapshot and each DomOnline with number seq>update\_seq (the keys of OrderBook topic are instrument and source id):
  - If the values are equal, you should replace the snapshot message with DomOnline.
  - If the values aren't equal, you should replenish the snapshot with DomOnline.

## 1.4.2. Example for Trades topic

The trade system may deny execution of client's request with an error message if the client's requests do not follow the algorithm specified below.

For example the client connect to Trades topic during the trade day (sequential numbers of messages are reset every night). Number of the last Trade message is 105.

Updates from Trades replenish earlier data.

- 1. Connect to Trades topic and wait for first trade message. If Trade message is not available withing 5 seconds after the connection, then the MdHeartbeat message is received.
- 2. Obtain sequential number seq of the first received message (for example, MdHeartbeat message with seq=305). You can determine, that messages from seq=106 to seq=304, were not received.
- 3. To recover messages you schould connect to the gateway and send TopicRequest with the topic=Trades, topic\_seq=106, and topic\_seqend=304.
- 4. The TopicRequest will result in the following message sequence:
  - TopicReport (seq=0, Start);
  - Trade (seq=1, topic\_seq=150);
  - Trade (seq=2, topic\_seq=170);
  - Trade (seq=3, topic seq=200);

### Service overview

- Trade (seq=4, topic\_seq=303);
- TopicReport (seq=0, End).

The broadcast of recovered data is surrounded by the TopicReport messages. The Trade messages have gaps between topic\_seq values, because the Heartbeat messages were received between Trade messages.

## 2. Protocol overview

## 2.1. Data types

The trading system uses little-endian byte order (same as in x86 processor); the client shall use same.

asciiN is an alphanumeric string of N-byte length; the unused part should be filled with zero bytes.

charN+1 is a UFT-8 encoded string of *N+1*-byte length. The last byte is the end of line character and so the available length is *N*; the unused part should be filled with zero bytes.

dec2 is an eight-byte integer representing a fraction multiplied by  $10^2$ .

dec8 is an eight-byte integer representing a fraction multiplied by 10<sup>8</sup>.

decn is a nine-byte sequence; the first eight bytes are an integer representing a fraction multiplied by  $10^n$  and the last byte is n. Its value should be within the range from 0 to 8.

intN is an N-byte integer.

time 4 is a four-byte integer representing the Unix time in seconds, i.e. the number of seconds since 1 January 1970.

time8n is an eight-byte integer representing the Unix time in nanoseconds, i.e. the number of nanoseconds since 1 January 1970.

time 8m is an eight-byte integer representing the Unix time in milliseconds, i.e. the number of milliseconds since 1 January 1970. If a field of this datatype conveys a date, the value part representing hours, minutes, seconds and milliseconds should be neglected, i.e. that is to use an integer value (rounded down) of division by 86 400 000.

## 2.2. Message format

A native protocol message is a sequence of field values in a strict order. Each message starts with the frame header; this three-field component includes message size, message type, and sequence number. The message size is the length of the whole message, except for the frame header, in bytes. The size is constant for all message types which don not include any repeating component or field.

A message is transmitted in a network packet as a sequence of bytes.

# 2.3. Common components of messages

Table 2. Format of component frame: length 12 bytes

Field	Datatype	Description	
size	int2	Message length in bytes, excluding the frame header	
msgid	int2	Message type	
seq	int8	Application message sequence number	

### **Common components for topics**

Table 3. Format of component instrument: length 6 bytes

Field	Datatype	Description		
market_id	int2	Liquidity pool ID. For a description of values, refer to Section 2.7		
instrument_id	int4	Trading instrument ID		

Table 4. Format of component md header: length 10 bytes

Field	Datatype	Description	
system_time	stem_time time8n Timestamp of message generation		
source_id	int2	Message source (for values please refer to section 2.6)	

#### Common components for recovery gateway

Table 5. Format of component user header: length 20 bytes

Field	Datatype	Description
clorder_id	ascii20	Client order ID

Table 6. Format of component gate header: length 46 bytes

Field	Datatype	Description	
system_time	time8n	Client request processing time	
source_id	int2	Message source (for values please refer to section 2.6)	
clorder_id	ascii20	Client order ID	
user_id	ascii16	Login, client gateway ID	

Table 7. Format of component header: length 22 bytes

Field	Datatype	Description	
topic_id	int4	Numerical ID of topic	
topic_seq	int8	Message sequence number in topic	
system_time	time8n	Message generation time	
source_id	int2	Message source (for values please refer to section 2.6)	

# 2.4. Recovered message format

The format of a recovered message is identical to that of a broadcast message, except for the header — the header stands for the md header. Therefore, offsets of all following fileds are increased by 12 bytes. This is due to the recovered message are transmitted via TCP, not UDP.

> Broadcast message format Datatype

[md\_header] [md\_header] Market data header [instrument] [instrument] Trading instrument

[frame]

Offset

Field

[frame]

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	[header]	[header]	Header
22	[instrument]	[instrument]	Trading instrument

Recovered message format

Figure 1. Message format alternation

# 2.5. Repetitive components and fields

Session header

Description

Several message types contain one or more repeating components or fields which may have an arbitrary number of entries. One message may include multiple repetitive components and fields. All same-type repetitive components has a constant length.

A repeating component or field is always preceded by the two fields — offset and count. The count field specifies the number of entries. The offset field indicates an offset in bytes of first entry from the beginning of this very field; its value is no less than 4.

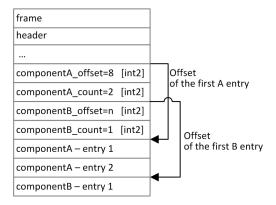

Figure 2. Template of a message with two repeating components

A repeating component may include another repeating component or field. In this case each entry refers to its own set of the embedded entries.

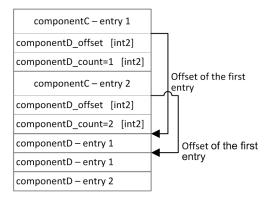

Figure 3. Template of embedded components

# 2.6. Source id values

Field <code>source\_id</code> is in the headers <code>gate\_header</code>, <code>md\_header</code> and <code>header</code>; the field specifies the module transmitting message to gateway for sending it to client.

Table 8. Source\_id values to be returned to client

Range	Description	
100–199	Trading system gateway	
200–249	Clearing House risk parameter verification modules	
250–259	Matching modules	
300–499	Modules of generation and calculation of market data	
500–549	Routing modules	
1000–1099	Liquidity pools identifiers	

# 2.7. Liquidity pool identifiers

Liquidity pools' identifiers may be in fields markets, market id and source id.

- 0 (DEFAULT) liquidity pool is defined by the trading system.
- 1001 (TRADSYS) all available liquidity pools
- 1000 (SPB) liquidity pool of SPB Exchange
- 1010 (MOEX\_FOND) liquidity pool of Moscow Exchange
- 1015 (IB) execution at United States liquidity pools
- 1017 (LSE) liquidity pool of LSE
- 1019 (SEHK) liquidity pool of SEHK
- 1021 (XETRA) liquidity pool of german equities

## 2.8. Volume dimension

Regardless of the direction of routing, the volume of any order is indicated in the internal lots of the trading system.

The size of the internal lot in the trading system may differ from the size of the lot in the external system for the same trading instrument.

The lot size of a trading instrument depends on the period and is specified in the corresponding balance instrument .

## 3.1. Snapshot start and finish

For all channels, a snapshot is preceded by a SnaphotStarted and followed by a SnapshotFinished. The both messages contains the updates\_seq field that conveys the sequence number of the last update message involved in the snapshot. Therefore, the update messages to be applied to the snapshot have a seq grater than the updates\_seq.

Table 9. Format of message SnapshotStarted: msgid=12345, size=18

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	[md_header]	[md_header]	Header
10	update_seq	int8	Sequence number of the last update included in the snapshot

Table 10. Format of message SnapshotFinished: msgid=12312, size=18

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	[md_header]	[md_header]	Header
10	update_seq	int8	Sequence number of the last update included in the snapshot

## 3.2. OrderBook topic

Snapshot is aggregation of all current data. Updates replenish and/or replace earlier data.

The OrderBook snapshot conveys 50 or less price levels; the updates concern 50 disclosed price levels only.

An OrderBook message concerns the order book of an instrument which is specified in the instrument component.

The updates are transmitted via the <code>DomOnline</code> messages, the snapshots are transmitted via the <code>DomSnapshot</code> messages.

The final part of an OrderBook message is the <code>sub\_dom</code> repeating component with the number of entries specified in the <code>PriceLevel\_count</code> field (for more information on processing of repeating component, refer to Section 2.5). A component entry includes price level, orders direction, add/update indicator, total disclosed amount of orders at the price level (in lots), and latest update timestamp.

The value of the flag field indicates whether the price level is added or updated; and a price level removal will be described as amount update to zero. In a snapshot, price levels are defined as new.

Decoding should use the size of the <code>aggr\_entry</code> field from the message. Don't use the <code>aggr\_entry</code> field size from the schema to avoid format extension problems in the future.

Table 11. Format of message DomOnline: msgid=1120, dynamic length, keys=instrument

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	[md_header]	[md_header]	Header
10	[instrument]	[instrument]	Component specifying trading instrument

Offset	Field	Datatype	Description
16	aggr_offset	int4	Offset of the first aggr entry from the beggining of this field
20	aggr_count	int2	Number of the aggr group entries
22	aggr_entry	int2	Size of the group aggr
	> aggr	[sub_dom]	List of price levels

Table 12. Format of message DomSnapshot: msgid=1121, dynamic length, keys=instrument

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	[md_header]	[md_header]	Header
10	[instrument]	[instrument]	Component specifying trading instrument
16	aggr_offset	int4	Offset of the first aggr entry from the beggining of this field
20	aggr_count	int2	Number of the aggr group entries
22	aggr_entry	int2	Size of the group aggr
	> aggr	[sub_dom]	List of price levels

Table 13. Format of component  $sub\_dom$ : length 30 bytes

Field	Datatype	Description	
price	dec8	Price	
yield	dec8	Yield	
type	int1	Sides of orders. Values:  • 1 (BUY_DIR): buy;  • 2 (SELL_DIR): sell;  • 3 (LAST_DEAL): last trade	
flag	int1	Flag of new entry. Values:  • 0x0 (UPDATE): updating;  • 0x1 (NEW): adding	
amount	int4	Total volume at the price level, in lots	
time	time8n	Time of recent price level change	

After a trading system restart, the gateway sends the  ${\tt EmptyBook}$  message to the OrderBook topic for an order book clearing.

Table 14. Format of message EmptyBook: msgid=15300, size=16

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header

Offset	Field	Datatype	Description
0	[md_header]	[md_header]	Header
10	instrument	[instrument]	Component specifying trading instrument

# 3.3. Trades topic

Snapshot is an entire message history since the start of the trading day. Updates replenish earlier data.

Upon a trade execution, the trading system generates a Trade message containing trade parameters with the liquidity pool of execution in the market field of the instrument component, with an unique trade identifier trade\_id, with the trade volume amount, with the trade price price, with the transaction timestamp trade\_time, and with taker's order side dir.

Table 15. Format of message Trade: msgid=19306, size=70, keys=instrument, trade\_id

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	[md_header]	[md_header]	Header
10	instrument	[instrument]	Component specifying trading instrument
16	trade_id	int8	Trade ID assigned by liquidity pool
24	amount	int4	Trade volume in lots
28	price	dec8	Trade price
36	trade_time	time8n	Trade time
44	trade_type	int1	Trade type. Value: 1 (REGULAR): regular trade
45	dir	int1	Initiator"s order side. Values:  • 1 (Buy): buy;  • 2 (Sell): sell
46	pad0	dec8	Additional price
54	flags	int8	Deals flags
62	yield	dec8	Trade yield

# 3.4. CurrentPriceOfMarket topic

Snapshot is aggregation of all current data. Updates **replenish** and/or **replace** earlier data.

The current price of market is continuously calculated, based on trade prices and hard quotes according to the following rules:

- 1. If a trade is made, the current price of market becomes equal to the trade price.
- 2. If an anonymous buy order appears in the order book, and its price is higher than the current price of market, the current price of market becomes equal to the buy order price.
- 3. If an anonymous sell order appears in the order book, and its price is lower than the current price of market, the current price of market becomes equal to the sell order price.

When the current price of market changes, an Indiquote message is created. The message includes the new value of the current price of market price, time of making a trade or placing an order that caused the current price of market to be changed trade time and a direction of this order dir.

Table 16. Format of message Indiquote: msgid=15411, size=70, keys=source\_id, instrument, trade\_id

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	[md_header]	[md_header]	Header
10	instrument	[instrument]	Component specifying trading instrument
16	trade_id	int8	For an order, the value is 0. For a trade — trade ID assigned by liquidity pool
24	amount	int4	For an order, the value is 0. For a trade — trade volume in lots
28	price	dec8	Current price of market
36	trade_time	time8n	Time of making a trade or placing an order
44	trade_type	int1	Trade type. Value: 1 (REGULAR): regular trade
45	dir	int1	Direction of the order that caused the current price of market to be changed. Values:  1 (Buy): buy; 2 (Sell): sell
46	pad0	dec8	Additional price
54	flags	int8	Trades flags. Value: 0x1 (HIGH_LIQUIDITY): high liquidity flag
62	yield	dec8	Trade yield

# 3.5. BestPrices topic

Snapshot is aggregation of all current data. Updates **replenish** and/or **replace** earlier data.

The BestPrices snapshot conveys the best offer, the best bid, and the latest trade. One message relates a trading instrument; the liquidity pool and the instrument are specified in the instrument component.

The updates are transmitted via the PricesOnline messages, the snapshots are transmitted via the PricesSnapshot messages.

The final part of a BestPrice message is the <code>sub\_best</code> repeating component with the number of entries specified in the <code>sub\_prices\_count</code> field (for more information on processing of repeating component, refer to Section 2.5). The component entry includes price level, orders direction, add/update indicator, total disclosed amount of orders at the price level (in lots), and latest update timestamp.

Table 17. Format of message PricesOnline: msgid=7651, dynamic length, keys=instrument

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header

Offset	Field	Datatype	Description
0	[md_header]	[md_header]	Header
10	instrument	[instrument]	Component specifying trading instrument
16	sub_prices_offset	int2	Offset of the first sub_prices entry from the beginning of this field
18	sub_prices_count	int2	Number of the sub_prices group entries
	> sub_prices	[sub_best]	List of the best price levels

Table 18. Format of message PricesSnapshot: msgid=7653, dynamic length, keys=instrument

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	[md_header]	[md_header]	Header
10	instrument	[instrument]	Component specifying trading instrument
16	sub_prices_offset	int2	Offset of the first sub_prices entry from the beginning of this field
18	sub_prices_count	int2	Number of the sub_prices group entries
	> sub_prices	[sub_best]	List of the best price levels

Table 19. Format of component sub\_best: length 22 bytes

Field	Datatype	Description
price	dec8	Price
type	int1	Entry type. Values:  • 1 (BEST_BUY): best price to buy;  • 2 (BEST_SELL): best price to sell;  • 3 (LAST_DEAL)
flag	int1	Flag of new entry. Values:  • 0x0 (UPDATE): updating;  • 0x1 (NEW): adding
amount	int4	Total volume of orders at level or volume of trade, in lots
time	time8n	Time of recent price level change or trade time

After a trading system restart, the gateway sends the  ${\tt EmptyBook}$  message to the BestPrices topic to delete all data on prices from the beginning of the trading day.

Table 20. Format of message EmptyBook: msgid=15300, size=16

0	[md_header]	[md_header]	Header

Offset	Field	Datatype	Description	
10	instrument	[instrument]	Component specifying trading instrument	

# 3.6. Commons topic

Snapshot is aggregation of all current data. Updates **replenish** and/or **replace** earlier data.

The Commons topic transmits various market parameters, see the list below. A Commons message concerns a single trading instrument; the liquidity pool and the instrument are specified in the instrument component.

The updates are transmitted via the CommonsUpdateOnline messages, the snapshots are transmitted via the CommonsUpdateSnapshot messages.

The messages contain the CommonsUpdateEntry repeating component and each entry describes a parameter. The datatype of the value field depends on the type. The number of entries is specified in the entry\_count field (for more information on processing of repeating component please refer to section 2.5).

Snapshots are transmitted in succession. An update is generated on data change.

Table 21. Snapshot and update parameters correspondence

Parameter type	Parameter code	Update type field	Update value field
Latest trade price	price_last	3	dec8
Opening price	price_open	4	dec8
Closing price	price_close	5	dec8
Highest price	price_high	7	dec8
Lowest price	price_low	8	dec8
Close yield of previous day	yield_close	71	dec8
Last trade yield	yield_last	72	dec8
Closing auction price of previous day	price_auction_close_prev	73	dec8
Halt price	price_halt	74	dec8
Timestamp of lowest current price	price_official_min_time	75	time8n
Indicative quote	price_indicative	76	dec8
Turnover of trades at closing auction price, in instrument units	vol_auction_close_extra	79	int8
Turnover for calculation of previous day's market price 3	price3_turnover_prev	80	dec2
Turnover for calculation of current day's market price 3	price3_turnover	81	dec2
Turnover for calculation of previous day's market price 2	price2_turnover_prev	82	dec2
Turnover for calculation of current day's market price 2	price2_turnover	83	dec2
Timestamp of current price calculation	price_official_time	84	time8n

Parameter type	Parameter code	Update type field	Update value field
Change in current price against official closing price of previous day	price_official_delta	85	dec8
Lowest current price	price_official_min	86	dec8
Latest trade price involved in current price	last_trade_official	87	dec8

Table 25. Format of component CommonsUpdateEntry: length 10 bytes

Field	Datatype	Description	
type	int1	Entry type.	
flags	int1	Flag of value. Values:  • 0x0 (NORMAL): valid; • 0x1 (DELETE): deleted	
value	int8	Entry value (valid when flags=0)	

# 3.7. Instruments topic

Snapshot is aggregation of all current data. Updates **replace** earlier data.

The Instrument topic broadcasts reference data on trading instruments:

- balance instrument Currency,
- balance instrument Issue,
- balance instrument Spot,
- balance instrument Futures,
- balance instrument Bond,
- accrued coupon income (BondAccruedInterest),
- trading modes (TradeModes),
- liquidity pools (Markets)
- trading instrument (Instrument).

The Instrument snapshot and updates transmits the same messages. The update of the Instruments topic broadcasts the TradingInstrumentsStatus message on instrument status change and the TradingInstrumentLimits on price limit change. The BorrowingStatus message is sent, when short selling availability of an instrument has changed.

The Instruments topic cannot be recovered over TCP.

Table 26. Format of message Currency: msgid=931, size=266, keys=balance\_id

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header

298	exchange_instrument_offset	int2	Offset of the first exchange_instrument entry from the beginning of this field
300	exchange_instrument_count	int2	Number of the exchange_instrument group entries
302	limit_up	dec8	Price limit up
310	limit_down	dec8	Price limit down
318	is_test	int1	Flag of test instrument. Values:  o (REAL): Real; flag of test instrument. Values:
319	te_id	int2	Trading engine ID
321	be_mode	int1	Best execution mode. Values:  • 0 (External): external trades;  • 1 (Internal): internal trades at external prices
322	borrowing_status	int1	Short selling availability for the instrument. Values:  1 (HARD_TO_BORROW): short selling unavailable; 2 (EASY_TO_BORROW): short selling available

Offset	Field	Datatype	Description
323	category	int4	Instrument category bitmask. Values:  • 0x1 (UNQUALIFIED_CLIENT_PROHIBITION);  • 0x2 (FOREIGNSECURITY_CLIENT_PROHIBITION);  • 0x4 (FOREIGNETF_CLIENT_PROHIBITION);  • 0x8 (UNQUOTRUSECURITY_CLIENT_PROHIBITION);  • 0x10 (DERIVATIVES_CLIENT_PROHIBITION);  • 0x20 (UNRATEDRUBOND_CLIENT_PROHIBITION);  • 0x40 (FOREIGNBOND_CLIENT_PROHIBITION);  • 0x80 (STRUCTEDBOND_CLIENT_PROHIBITION);  • 0x100 (STRUCTEDINCOMEBOND_CLIENT_PROHIBITION);  • 0x200 (REPO_CLIENT_PROHIBITION);  • 0x400 (CLOSEDFUND_CLIENT_PROHIBITION);
	> fee_rate	dec8	Fee rate
	> periods	[Period]	Component of trading periods (such as trading session) for instrument
	> exchange_instrument	[ExchangeInstrument]	Component specifying trading instruments at liquidity pools

In this version of the trading system, the fee rate group has five entries. The group has the following sequence of entries:

- 1. Minimum fee rate, in instrument currency.
- 2. Fee rate for pre-delivery trades, in instrument currency.
- 3. Taker fee rate depending on fee scheme: portion of trade volume in price currency for shares; amount of price currency per contract for derivatives; portion of the first leg value multiplied by repo duration for repo.
- 4. Maker fee rate depending on fee scheme: portion of trade volume in price currency for shares; amount of price currency per contract for derivatives; portion of the first leg value multiplied by repo duration for repo.
- 5. Accuracy.

Values of third and fourth records are based on the mechanism of fee calculation specified in the fee\_schema field.

The <code>category</code> field indicates the instrument category in the trading system in accordance with designations adopted on the SPB Exchange. The correspondence between designations of instrument categories in the trading system and Interfax is shown in the table below.

Table 35. Correspondence between designations of instrument categories in the trading system and Interfax

Bitmask	Instrument category in the trading system	Instrument category in Interfax
0x1	UNQUALIFIED_CLIENT_PROHIBITION	0
0x2	FOREIGNSECURITY_CLIENT_PROHIBITION	10
0x4	FOREIGNETF_CLIENT_PROHIBITION	11
0x8	UNQUOTRUSECURITY_CLIENT_PROHIBITION	9
0x10	DERIVATIVES_CLIENT_PROHIBITION	_

Bitmask	Instrument category in the trading system	Instrument category in Interfax
0x20	UNRATEDRUBOND_CLIENT_PROHIBITION	6
0x40	FOREIGNBOND_CLIENT_PROHIBITION	7
0x80	STRUCTEDBOND_CLIENT_PROHIBITION	4
0x100	STRUCTEDINCOMEBOND_CLIENT_PROHIBITION	8
0x200	REPO_CLIENT_PROHIBITION	_
0x400	CLOSEDFUND_CLIENT_PROHIBITION	5
0x800	DELISTED_CLIENT_PROHIBITION	_

Table 36. Format of message TradingInstrumentStatus: msgid=2031, size=84, keys=instrument

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	[md_header]	[md_header]	Header
10	instrument	[instrument]	Component specifying trading instrument
16	trading_status	int1	Current status of trading instrument. Table 43. Format of component Underlying: length 15 bytes

Field	Datatype	Description
balance_id	int4	Balance instrument ID
qty	decn	Number of balance instrument units
flags	int2	Flags field. Values:  • 0x1 (CORP_DUE_BILL): additional liability in connection with corporate event;  • 0x2 (CORP_CORRECTION): liability adjustment by clearing center in connection with corporate event;  • 0x4 (CORP_INCOME_RETURN): transfer of income in connection with corporate event;  • 0x8 (PRINCIPAL_OBLIGATION): principal liability flag

# 3.8. Heartbeat message

The gateway sends a MdHeartbeat in the topic updates if no message is transmitted for more than a second.

Table 44. Format of message MdHeartbeat: msgid=15236, size=14

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	[md_header]	[md_header]	Header
10	reserved	int4	Reserved field. Zero value

# 4. Recovery gateway

The recovery gateway allows the client to request resending of update messages, if they were lost via UDP. You can request the following topics' updates via the recovery gateway: OrderBook, Trades, BestPrices, Commons and CurrentPrice-OfMarket.

The whole history from the start of a trade day is available for recovery only for Trades and CurrentPriceOfMarket topics; for all other topics a client can recover only recent messages. Due to technological limitations, messages from the previous trade day can be recovered.

Client should use the discovery service to connect to the recovery gateway.

## 4.1. Session layer

## 4.1.1. Discovery service

The Discovery service provides a host address for client connections to the trading system gateway. The client should request the service for address allocation each time before connecting to the gateway. Upon receipt of response, the client should disconnect from the login server and connect to a gateway through the received address.

For the address for accessing the Discovery service, please refer to document Network Connectivity.

After establishing connection with the Discovery service, the client should send the Hello message. The message contains the session header frame (for more details, refer to Section 2.2). The client should specify login and password, and the IP address of the client must be authorized for the specified login (user ID).

Table 45. Format of message Hello: msgid=1, size=32

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	login	ascii16	Login
16	password	ascii16	Password

In response to request, the server sends the Report message. If this message has status=0, the message contains repetitive component Report\_Address; the number of component records will be specified in the field addresses\_count (for more details on processing of repeating groups, refer to Section 2.5). The component includes fields type (gateway attribute) and address (host address and gateway port). Gateway attributes may combine.

After the trading system responds, the gateway will expect the client's login connection to the specified address. In case of failure, the client is recommended to make two additional connection attempts with an interval of half a second. If the login is invalid or blocked, the server response will contain status=1.

Table 46. Format of message Report: msgid=2, dynamic length

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	status	int2	Request status. Values:  • 0 (Success): success;  • 1 (Fail): reject due to invalid login/password
2	reason	char127+1	Textual description
130	addresses_offset	int2	Offset of the first addresses entry from the beginning of this field
132	addresses_count	int2	Number of the addresses group entries

Offset	Field	Datatype	Description
	> addresses	[Report_Address]	Address list

Table 47. Format of component Report\_Address: length 52 bytes

Field	Datatype	Description
type	int2	Gateway attributes, bit mask. Values:  • 0x1 (Transaction): trading;  • 0x2 (DropCopy): drop-copy;  • 0x4 (Risk): risk management;  • 0x8 (Dictionary): dictionaries;  • 0x10 (MarketData): market data recovery;  • 0x4000 (Backup): backup
ver	int1	Interface version
pad0	int1	Reserved field, filled with zero bytes
address	char47+1	Address of host and gateway port

## 4.1.2. Session initialization

A session is established over a network connection between the client's system and the gateway of the trading system.

Once connection is established, the client can send the Login message to initiate a session. The message includes the user ID and the password. The system validates the authentication parameters and answers with the Logon message and so the session is active. Upon receipt of a malformed Login message or invalid login/password, the server breaks the connection.

A login may have a single concurrent session. If the server detects a second connection attempt via the same login while a valid session is already underway, the server will respond with Reject.

Table 48. Format of message Login: msgid=8001, size=37

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	login	ascii16	Login
16	password	ascii16	Password
32	reset_seq	int1	Reset sequence numbers indicator. Values:  • 0 (no): sequence numbers continue;  • 1 (yes): sequence numbers reset
33	heartbeat_ms	int4	Heartbeat frequency in milliseconds

Table 49. Format of message Logon: msgid=8101, size=24

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	last_seq	int8	Last application message available to client.  If altered form the last received message, ResendRequest is to be sent

Offset	Field	Datatype	Description
8	expected_seq	int8	Next application message expected from client
16	system_id	ascii8	Deployment ID

## 4.1.3. Keeping session in active state

The client and the gateway must exchange Heartbeat messages to maintain session in active state. Heartbeat must be sent, if no session or application message has been sent within the heartbeat interval.

When initiating a session, the client sets the heartbeat interval in the field heartbeat ms of the Login message.

If the server detects that the client has not sent any messages, including the <code>Heartbeat</code> messages, for a period longer than the specified interval, the system will break the connection. The client is expected to do the same, if inactivity is detected on the part of the server.

Table 50. Format of message Heartbeat: msgid=8103, size=0

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header

## 4.1.4. Send rate limit for session messages

The rate at which a client can send session level messages into the system is limited. When client's send rate exceeds the limit, the system terminates the user session.

## 4.1.5. Message numbers

All application messages have a unique number throughout the trading day. Messages by each session side (the client and the gateway) are sequentially numbered with positive integers starting with 1. This allows to request and resend messages lost in case of unexpected disconnection.

Sequence numbers are not assigned to session messages — the seq value is always 0.

In order to maintain sequential numbering of messages, at session initialization the gateway provides two key values in its Logon message — the number of the last message sent (last\_seq) and the expected number of the following message (expected\_seq).

If the message number differs from the expected one, the gateway terminates the connection. After disconnection, the client should reconnect by addressing the Discovery service and restore the number of messages according to the values obtained in the Logon message from the gateway. The gateway never initiates a change in numbering when receiving a message with the number higher than expected.

The trading system supports continuous message numbering between trading sessions, including trading days. The client should set reset seg=1 in message Login at session initialization to reset numbering.

## 4.1.6. Session termination

The server or the client sends Logout to terminate the session and expects the other party to disconnect.

Table 51. Format of message Logout: msgid=8002, size=16

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	login	ascii16	Login, client gateway ID

## 4.1.7. Message rejection

If the client's message is either malformed or contains invalid values, the system rejects such message and responds with Reject. The ref\_msgid field specifies message type, ref\_seq contains the application level message number or has 0 for session message, fields reason and message contain, correspondingly, code of rejection reason and its description.

Table 52. Format of message Reject: msgid=8102, size=45

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	ref_seq	int8	Sequence number of rejected message
8	ref_msgid	int2	Type of rejected message
10	reason	int2	Code of rejection reason
12	message	char32+1	Rejection parameters or textual description

### 4.1.8. Disconnection

System disconnects when receiving message:

- with unknown value of msgid,
- with a size incorrect for the specified message type,
- with a seg number other than expected.

## 4.1.9. Data request

To request data, client should send TopicRequest to the trading system gateway specifying topic ID. The client does not have to fill the clorder id field.

The client can specify the range of requested messages through topic seq and topic seqend fields:

- topic seq=n, topic seqend=m request for messages from n to m.
- topic seq=0, topic seqend=n request for messages from the lowest number available to n.

When making an initial request for Trades topic, the client should specify 0 in topic\_seq and topic\_seqend fields. And in a repeating request, value of the topic\_seq field should be one more than value of the topic\_lastseqsent field in the last received TopicReport. If TopicReport is not recieved, value of the topic\_seq field should be one more than that of the last message received.

When requesting for OrderBook, CurrentPriceOfMarket, BestPrices, Commons, Instruments, the client should specify 0 in topic seq and topic seqend fields.

In the next following version of the trading system, the maximum range will be set.

If a request can be processed, the client will receive the <u>TopicReport</u> message and after that should expect data messages. After data transfer is completed, the client will also receive <u>TopicReport</u>.

If a request is incorrect or cannot be processed, the client will receive the TopicReject message.

If you want to request a new topic, wait until you have received all messages, related to the previous topic request, to avoid network overload.

Table 53. Format of message TopicRequest: msgid=301, size=101

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	[user_header]	[user_header]	Standard header
20	topic	ascii64	Topic ID
84	topic_seq	int8	First number of requested messages
92	topic_seqend	int8	Last number of requested messages

Offset	Field	Datatype	Description
100	mode	int1	Broadcast mode. Value: 0 (DATA_SLICE): snapshot

## 4.1.10. Report on executing request

The client will receive the TopicReport message in the following cases:

- successful execution of the data request TopicRequest;
- completion of snapshot transmission.

The message includes reference fields  $topic\_lastseq$  (the number of the last message generated in the topic) and  $topic\_lastseqsent$  (the number of the last message sent to the client).

Table 54. Format of message TopicReport: msgid=401, size=134

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	[gate_header]	[gate_header]	Standard header
46	topic	ascii64	Topic ID
110	topic_id	int4	Numerical topic ID
114	status	int2	Status of data transfer. Value: 0 (DATA_SLICE): snapshot transfer
116	marker	int2	Indicator of start and finish of data transfer. Values:  • 0 (START): start of data transfer;  • 2 (SLICE_END): snapshot transfer completed
118	topic_lastseq	int8	Number of the last message generated in the topic
126	topic_lastseqsent	int8	Number of the last message sent to the client

## 4.1.11. Report on rejecting request

If the client's request is incorrect or cannot be processed, the client will receive the <u>TopicReject</u> message. The reason for rejection is specified in the reason field.

The TopicReject message includes reference fields topic\_lastseq (the number of the last message generated in the topic) and topic lastseqsent (the number of the last message sent to the client).

For streams with Trades and IQ identifiers (refer to document *Network Connectivity*) in the TopicReject messages, the number in the topic firstseq field is the same as the number of the first available message.

Table 55. Format of message TopicReject: msgid=402, size=142

Offset	Field	Datatype	Description
	[frame]	[frame]	Session header
0	[gate_header]	[gate_header]	Standard header
46	topic	ascii64	Topic ID
110	topic_id	int4	Numerical topic ID

### Recovery gateway

Offset	Field	Datatype	Description
114	status	int2	Status of data transfer. Values:  • 0 (DATA_SLICE): snapshot transfer;  • 2 (INACTIVE): no data transfer
116	reason	int2	Reason for rejection. Values:  • 1 (BAD_TOPIC): invalid topic identifier;  • 4 (DATA_NOT_AVAILABLE): data not available;  • 5 (DUPLICATE_REQUEST): repeated request;  • 6 (BAD_SEQ): invalid message number in the topic;  • 7 (BAD_MODE): invalid mode
118	topic_firstseq	int8	Number of the first message since the beginning of the trading day
126	topic_lastseq	int8	Number of the last message generated in the topic
134	topic_lastseqsent	int8	Number of the last message sent to the client

# **Appendix A. Error codes**

Table 56. Error codes list

Code	Description
0	Ok
1	Sell short is not allowed.
5	Missed tag.
100	Filled excess tag.
999	Internal error.
1000	Incorrect login.
1001	Incorrect instrument.
1002	Incorrect client ID.
1003	Invalid member_id.
1004	Invalid account.
1005	Incorrect client group.
1006	Incorrect exchange.
1007	Instrument not traded.
1008	Invalid routing options.
1100	Invalid order direction.
1101	Incorrect price.
1102	Incorrect price_extra.
1103	Incorrect amount.
1104	Incorrect amount_extra.
1105	Invalid order type.
1106	Invalid time_in_force.
1107	Invalid passive_only.
1108	Invalid auto_cancel.
1109	Invalid flags.
1110	Invalid mode.
1111	Incorrect clorder_id.
1112	Incorrect orig_clorder_id.
1113	Invalid prime_exchange.
1114	Invalid date_expire.
1115	Invalid comment.

Code	Description
1116	Invalid level.
1117	Invalid trade_mode.
1200	Invalid segment.
1201	Incorrect extra1.
1202	Incorrect OTC code for negotiated trade initiator.
1203	Incorrect OTC code for counter party.
1204	Invalid order_type for this instrument.
1205	Order_type not supported by exchange.
1206	Invalid order_type for Client ID.
1207	Incorrect price for this order_type.
1208	Incorrect amount_extra for this order_type.
1209	Invalid time_in_force for this order_type.
1210	Invalid flags for this order_type.
1211	Invalid instrument for replacement mode.
1212	Invalid member_id for replacement mode.
1213	Invalid client_id for replacement mode.
1214	Invalid account for replacement mode.
1215	Invalid parameters of rejected counter order.
1216	Invalid replacement parameters.
1217	Invalid time_in_force for this instrument.
1218	Invalid replacement mode for this login.
1219	Invalid flags for this instrument.
1300	Both orig_clorder_id and order_id filled.
1301	Duplicate clorder_id.
1302	Price exceeds limits.
1303	Order type not supported for this client ID.
1304	Order type not supported by exchange.
1305	Invalid prime_exchange for this instrument.
1306	Liquidity pool unavailable for client ID.
1307	Invalid order_type for this instrument.
1308	User has no permissions to cancel orders of account specified.
1309	User has no permissions to replace orders of account specified.

Code	Description
1310	User has no permissions to reject this order.
1311	Order currently being replaced.
1312	Order sent before system crash, but received after recovery.
1313	Limitation not available for this instrument.
1314	User has no permissions to use this mode.
1315	This exchange is prohibited for clearing member.
1316	This exchange is prohibited for trade member.
1317	Order submission via the login is blocked.
1318	Order submission via the login is blocked for the client code.
1319	Order submission via the login is blocked for the TCA.
1400	Instrument not available for market maker.
1401	No permissions to trade this instrument.
1402	No permissions to indicate 'No matching another market maker's orders'.
1403	Client has no permissions to trade with using this account.
1404	Liquidity pool not available for this smart order router.
1405	No permissions to trade this instrument category.
1500	Trade engine IDs (te_id) do not match.
1501	Incorrect te_id.
1502	Request received during the limited margin update.
1700	User has no permission for limited margin service.
1701	Client has no permissions for limited margin service.
1702	Client group has no permissions for limited margin service.
1703	Account has no permissions for limited margin service.
1704	Main account has no permissions for limited margin service.
1710	Invalid parameters for limited margin of client.
1711	Invalid parameters for limited margin of client group.
1712	Invalid parameters for limited margin of account.
1713	Invalid parameters for limited margin of main account.
1714	Request for limited margin update for client received when the previous request still processing.
1715	Request for limited margin update for client group received when the previous request still processing.
1716	Request for limited margin update for TCA received when the previous request still processing.
1717	Request for limited margin update for principal TCA received when the previous request still processing.

Code	Description
1720	Incorrect limit for limited margin.
1721	Incorrect instrument limit for limited margin.
1722	Incorrect order limit for limited margin.
1723	Incorrect extra limit for limited margin.
1750	Insufficient limit for limited margin of client.
1751	Insufficient instrument limit for limited margin of client.
1752	Insufficient order limit for limited margin of client.
1753	Insufficient extra limit for limited margin of client.
1754	Insufficient limit for limited margin of client group.
1755	Insufficient instrument limit for limited margin of client group.
1756	Insufficient order limit for limited margin of client group.
1757	Insufficient extra limit for limited margin of client group.
1758	Insufficient limit for limited margin of account.
1759	Insufficient instrument limit for limited margin of account.
1760	Insufficient order limit for limited margin of account.
1761	Insufficient extra limit for limited margin of account.
1762	Insufficient limit for limited margin of main account.
1763	Insufficient instrument limit for limited margin of main account.
1764	Insufficient order limit for limited margin of main account.
1765	Insufficient extra limit for limited margin of main account.
1766	The client has active orders of limited margin.
1767	The client group has active orders of limited margin.
1768	The TCA has active orders of limited margin.
1769	The principal TCA has active orders of limited margin.
1770	Limited margin suspended for client.
1771	Limited margin suspended for client group.
1772	Limited margin suspended for account.
1773	Limited margin suspended for main clearing account.
1780	Invalid liquidity pool for limited margin service.
1800	Incorrect yield type specified.
1801	Incorrect yield conversion direction specified.
1980	Invalid stages in info field.

Code	Description
2100	Account does not belong to member_id.
2200	No permissions to submit trading instructions.
2201	Client group level prohibition is set.
2202	Trade member level prohibion is set.
2203	Clearing member prohibion is set.
2204	Trade administrator level prohibion is set.
2300	No permissions to place an unsecured order.
2400	No permissions to cancel order.
2600	No permissions to set limit for clearing account.
2601	No permissions to set limits for client ID.
2602	No permissions to set limits for client group.
2603	Invalid type.
2604	Invalid value.
2605	Ambiguous type.
2700	Client ID has insufficient funds.
2701	Client ID has insufficient assets.
2702	Client group has insufficient funds.
2703	Client group has insufficient assets.
2704	Account has insufficient funds.
2705	Account has insufficient assets.
2706	Main clearing account has insufficient funds.
2707	Main clearing account has insufficient assets.
2708	Clearing member has insufficient funds.
2709	Insufficient blocked assets.
3000	Market or IOC order expired after no trades.
3001	Order canceled after no trades, to avoid a cross trade.
3002	Order canceled after no trades, to avoid a crossed book.
3003	Client order not found.
3004	Instrument trading suspended.
3005	User has no permission to trade this instrument during the current trading period.
3100	TCA of maker and that of taker have no conversion bank indicator.
3911	Incorrect te_id.

Code	Description
4000	ECN not available or no liquidity pool available.
4001	The specified liquidity pool not available.
4002	Order forcedly routed to a liquidity pool after rejected by risk management at the trading system.
4003	Client ID not registered at all the available liquidity pools.
4004	Client ID not registered at the trading system.
4005	Client ID not registered at liquidity pool.
4006	Order cannot be routed to any liquidity pool.
4100	Order pending cancel.
4101	The order was rejected by an external platform.
4200	Invalid client for TCA registered at liquidity pool.
4201	Invalid TCA for liquidity pool.
5000	Invalid application message type.
5001	Invalid routing_dest.
5002	Invalid message type for this login.
5003	Login has no permissions to submit such instruction.
5200	User already logged in.
5201	Discovery service settings timeout.
5202	Incorrect heatbeat_ms.
5203	Incorrect user ID / password.
5204	Incorrect message sequence number.
5205	Invalid session message type.
5206	User not logged in.
5207	Another resend request processing in progress.
5208	Incorrect range limit.
5209	Invalid reset_seq.
5210	Requested messages range excess.
5211	Invalid session message size.
5212	Disconnected by the operator.
5300	Invalid topic.
5301	Snapshot with updates has already been requested.
5302	Snapshot with updates has not been requested.
5303	Requested data not available.

Code	Description
5304	Another request processing in progress.
5400	Reset_seq indicated, but seqnums cannot be reset.
5401	Number of messages exceeded limit.
5601	Both account and parties filled.
7000	Order canceled before sending to ASTS.
7001	Order canceled as no answer received.

Also you can get errors come in range -11000-11999. These are the error codes returned by the trading system of the Moscow stock exchange (ASTS). To get the ASTS error id , you need to subtract 11000 from the internal error id. The description of these errors, a client can get from the ASTS documentation.

# Appendix B. Revision history

### Version 1.13.0 24 December 2015

- 1. The is\_test field is added in Currency, Issue, Spot, Futures, and Bond messages.
- 2. In <u>Instrument</u> message, the is\_test, te\_id, and be\_mode fields are added, the reserved removed and the msgid changed.
- 3. In the Underlying component, the flags field is added and the size of the qty field is altered.

#### Version 1.12.0 10 November 2015

The broadcast of the CurrentPriceOfMarket topic started.

### Version 1.11.1 14 October 2015

The datatype for the type=76 value is altered in the Commons update.

#### Version 1.11.0 1 October 2015

The size of the <u>Underlying</u> component is altered, because the qty datatype is changed.

### Version 1.10.0 2 July 2015

- 1. New value 76 of the type field in the Commons Update added.
- The format of <u>Instrument</u> message amended—size of trade\_mode\_id reduced to 2 bytes and reserved field added
